

# Product sheet Glice® Rent

## Product sheet

Our skating rinks can be rented on sizes from 100M<sup>2</sup> up to 3000M<sup>2</sup>, any size in between is possible. In case of sales: any size is possible.

The standard sheets have the following sizes: 120 cm x 60 cm, so 0,72M<sup>2</sup> per sheet. This makes it possible to make almost any size of skating rink. If you like we can also delegate a Glice Master to you for the time of the event. He or she will supervise the skating and effectively run the skating operation for you. This allows you to concentrate on all the other things you need to do around your event. We recommend working with local Skating Clubs as they have lots of experience which they often cannot use anymore because of the warm winters without ice. The ice clubs can be enthusiastic partners in the skating event.

Recommendations:

1. When a Glice rink is to be placed in a public space: settle the permits well in advance.
2. For safe usage and a proper straight skating floor: a flat and stable underground is required; Glice can give advice on this matter and can help you prepare for the installation.
3. Electricity will be needed: 220/230 Volt with a maximum Wattage of 1.500 Watt.
4. Access to a water tap nearby is very handy
5. Safety: it is advisable (in a public place) to secure the properties by surrounding them with a fence of some sort. This prevents theft and or damages. As the renter is responsible for safety, insurance should be in place.
7. Make sure that there are signs that stipulate that the liability for usage is not with the organisation but with the users themselves.

Our product range consists of basic packages and additional options. In this way you can compose your own individual package that suits you best.

### **Glice® basic package:**

- A skating floor of PE sheets of 120 cm long, 60cm wide and 20cm thick. The sheets are connected by our special click system which creates an almost seamless floor.
- A subfloor: if needed a subfloor can be installed when the underground is not really flat or a little bit bumpy. Glice will always look for the best possible solution for you specific needs.
- An inflatable boarding of 80cm diameter, made of the same tough canvas as is used for children inflatable play castles etc. It is safe and can also be used for advertising purposes.
- Glice® Equipment package:
  - The Glice® Cleaner. As with every sport court; when dirty it must be cleaned. Glice provides the Glice cleaning machine which makes it easy to clean the skating floor when needed. It is the same robust machine as is used in large malls to clean the floors. Also, after heavy rainfall the machine can be used to quickly clean and dry the skating floor
  - Glice® Sprinkler to easily apply the Glice Nano Coating on the floor
  - Glice® Knife : always Handy to have a working tool available
- Glice® Nano Coating: Glice delivers with each rented skating rink enough Nano Coating for the whole period at normal usage. Re-ordering is very easy. Any surplus Nano Coating will be taken back at de-installation.
